INTRODUCTION

In October 2004, the Chesapeake Bay Program released *Chesapeake Bay Program Analytical Segmentation Scheme: Revisions, Decisions, and Rationales 1983-2003* (U.S. Environmental Protection Agency 2004). The Segmentation Scheme Report provided documentation on the development of the spatial segmentation scheme of the Chesapeake Bay and tidal tributaries over the period from 1983 to 2003. Included within the Segmentation Scheme Report were tables describing the segment boundaries and split segment boundaries.

Segments have been defined as a way of grouping areas with similar natural characteristics. To date, segment boundaries have been defined based on selected ecological criteria. As a result, management and monitoring strategies can be defined for each segment as a whole. Additional information on the rationale for utilizing natural characteristics for delineating segments can be found in the Segmentation Scheme Report.

It has become increasingly apparent that the political jurisdictions charged with adopting water quality standards and developing management strategies for waters within their jurisdiction need well defined boundaries for the segments that lie *within their authority*. The 2003 revisions to the Chesapeake Bay Program segmentation scheme included multiple segments and split segments that crossed jurisdictional boundaries. This has led to some confusion as to the area within segments that are under the jurisdiction of the individual states and the District of Columbia. In an effort to address this concern, the Chesapeake Bay Program has revised the descriptions contained within the Segmentation Scheme to more fully reflect jurisdictional boundaries.

The purpose of this addendum is to provide an updated description of segments and split segments by jurisdiction. Each segment or split segment definition contains a series of points that are defined by both a set of latitude and longitude coordinates in decimal degrees and a textual narrative describing their location. The segment boundaries follow the shorelines between the geo-referenced boundary coordinates including within each segment, all tidally influenced waters.

In the original Segmentation Scheme Report, the segment and split segment descriptions were presented in Appendix B (split segments) and Appendix C (segments). For purposes of this Addendum, the updated segment descriptions are presented here as revisions to those appendices. Appendix A of the original Segmentation Scheme remains unchanged and therefore is not replicated here.

METHODS USED TO SUBDIVIDE SEGMENTS AND SPLIT SEGMENTS BY JURISDICTION

Originally, the impetus to divide certain Chesapeake Bay Program segments came from the desire of Maryland, Virginia and the District of Columbia to adopt submerged aquatic vegetation (SAV) restoration acreages in their respective water quality standards regulations for the tidal Potomac River. Each Chesapeake Bay Program segment was allocated acreage-specific SAV restoration goals, but the jurisdictions wanted to know what portions of those segments were legally responsible for. To allocate the area of individual Chesapeake Bay Program segments shared by two or more jurisdictions to the appropriate jurisdiction, it became necessary to apply state and District boundary data to be able to subdivide those segments. However, there were no legally recognized boundary data for the tidal Potomac River or even one common boundary dataset that all of the jurisdictions were using. An attempt was made to create a jurisdictional boundary file for the tidal Potomac River that Maryland, Virginia and the District of Columbia could agree upon.

After examining several different digital boundary files, it was determined that the best boundary along the Virginia shoreline was one produced by the Virginia Department of Conservation and Recreation (VA DCR). The VA DCR boundary was mostly based on the state boundaries appearing on digital 1:24000 scale quad sheets (digital raster graphics, or DRGs). The Maryland-Virginia state boundary delineated on the quad sheets appears to be based on the Mathews-Nelson Survey of 1927, which used the legally defined boundary of the low-water mark on the Virginia side of the river, except where embayments were crossed from one point on land to another point on land. However, shorelines can change in almost 80 years, either through natural or anthropogenic influences, which may partially account for discrepancies between the legal definition of the boundaries and how the data appear today. The state boundary was digitized on-screen using the DRGs as a background upon which to trace the line work. In the lower Potomac River, DCR used 1:12000 scale digital orthophoto quarter quads (DOQQs) having photo dates of 1992-1996 as the source for the boundary definition. Maps of the state boundary along the Potomac River are included in Technical Support Document for Identification of Chesapeake Bay Designated Uses and Attainability: 2004 Addendum (U.S. Environmental Protection Agency 2004b).

For the Maryland-District of Columbia boundary lines that cross the Potomac River diagonally from the Virginia shoreline, data provided by the District of Columbia Department of Health's Water Quality Control Branch were used. These data and the VA DCR data were merged to create a boundary file that all three jurisdictions agreed to use in allocating SAV restoration goals in those shared segments.

Later, it was determined that all segments that crossed jurisdictional boundaries needed to be subdivided. This included the continuation of the Maryland-Virginia boundary across the Chesapeake Bay and partly up the tidal Pocomoke River, and the two tidal tributaries—C & D Canal and Nanticoke River—that straddled the Maryland-Delaware boundary.

The Maryland-Virginia state boundary from VA DCR extended across the Chesapeake Bay and up the tidal Pocomoke River. This boundary was used with slight modification of some of the vertices of the boundary in Pocomoke Sound that subdivided segments POCMH and POCOH. Maryland Department of the Environment provided coordinates of a series of navigational buoys that define the Maryland-Virginia state boundary at those vertices. The original VA DCR boundary data were altered to reflect these navigational buoy locations. The differences in distance between the navigational buoy locations and the vertices in the VA DCR data were all less than 30 meters, most less than 10 meters.

For the Maryland-Delaware boundary, Maptech 1:24,000 scale DRGs were used to digitize the boundary line on-screen. The GIS coverage was then edited and the two affected segments were split by the state boundary.

Those Chesapeake Bay Program segments that encompass multiple jurisdictions are:

	Segment Effected	
Segment Name	Descriptor	Jurisdictions
C&D Canal	C&DOH	(DE, MD)
Upper Nanticoke River	NANTF	(DE, MD)
Anacostia	ANATF	(DC, MD)
Upper Potomac River	POTTF	(DC, MD, VA)
Middle Potomac River	РОТОН	(MD, VA)
Lower Potomac River	POTMH	(MD, VA)
Lower Central Chesapeake	CB5MH	(MD, VA)
Tangier Sound	TANMH	(MD, VA)
Lower Pocomoke River	POCMH	(MD, VA)
Middle Pocomoke River	РОСОН	(MD, VA)

The Chesapeake Bay Program split segments were created to aid Maryland and Virginia in their adoption of SAV restoration acreages and water quality standards (U.S. Environmental Protection Agency 2004b). Two of the segments that were split for this purpose (POTOH and TANMH) share both Maryland and Virginia waters. Since the two segments were split by request of Maryland Department of the Environment for Maryland attainment, only the Maryland portion of those segments was required. The state boundary data that was used to subdivide all shared segments by jurisdiction was also used to subdivide the split segments POTOH1 and TANMH1. Only the Maryland portion of these split segments was retained in the data set.

WEB ACCESS TO SEGMENTATION SCHEMES

The Chesapeake Bay Program partners maintain web access to the past and present segmentation schemes at www.chesapeakebay.net. Segment maps and a map of current monitoring stations can be found under Maps and Mapping at this website. Segment maps and monitoring maps are available in GIS format at:

ftp://ftp.chesapeakebay.net/pub/Geographic/Chesapeake Bay.

The appendices contained in this addendum are available as an EXCEL file at: www.chesapeakebay.net/segmentscheme.htm.

VIRGINIA SEGMENT BOUNDARIES

Lower Central	l Chesapeake Bay	CB5MH	6
37.619465	-76.280251	Fleets Island, at end of road north of Wind	mill Point
37.797581	-76.025650	3 miles west northwest of Tangier Sound L	ight
37.941404	-76.083908	MD/VA boundary, 2.25 miles west of Smith	n Gut Point
37.885680	-76.229038	MD/VA boundary, 2500 feet southwest of S	Smith Point
37.889451	-76.236198	Smith Point	
37.909725	-76.263702	East of Ophelia, 300 feet northwest of ligh	t
Upper Potoma	c River	POTTF	5
38.524181	-77.285294	Midway between Shipping Point and Quant	tico Pier
38.524168	-77.284864	MLW midway between Shipping Point and	Quantico Pier
38.791836	-77.038923	DC/MD/VA boundary 200 feet east of Jone	s Point Park
38.929522	-77.116453	MHW, Chain Bridge, western shore	
38.929473	-77.116695	Chain Bridge, western shore	

Following the MLW line which defines the Maryland/Virginia boundary to the first point described above. This segment contains the following embayments where the Maryland/Virginia boundary is the confluence of the mouth of the embayment with the Potomac River:

Hunting Creek	Unnamed embayment (Mason Neck NWR)
Little Hunting Creek	Occoquan Bay
Dogue Creek	Powells Creek
Gunston Cove	Quantico Creek

Middle Potoma	c River	POTOH 4
38.389660	-77.029305	1 mile southeast of Mathias Point, just north of Route 639
38.389680	-77.029268	MLW 1 mile southeast of Mathias Point, just north of Route 639
38.524168	-77.284864	MLW midway between Shipping Point and Quantico Pier
38.524181	-77.285294	Midway between Shipping Point and Quantico Pier

Following the MLW line which defines the Maryland/Virginia boundary to the first point described above. This segment contains the following embayments where the Maryland/Virginia boundary is the confluence of the mouth of the embayment with the Potomac River:

Unnamed Embayment (Chopawamsic Island) Aquia Creek
Unnamed Embayment (near Arkendale Road) Potomac Creek

Lower Potomac	e River	POTMH	4
37.909725	-76.263702	East of Ophelia, 300 feet northwest of light	
37.909777	-76.263700	MLW east of Ophelia, 300 feet northwest of l	ight
38.389680	-77.029268	MLW 1 mile southeast of Mathias Point, just no	orth of Route 639
38.389660	-77.029305	1 mile southeast of Mathias Point, just north of	of Route 639

Following the MLW line which defines the Maryland/Virginia boundary to the first point described above. This segment contains the following embayments where the Maryland/Virginia boundary is the confluence of the mouth of the embayment with the Potomac River:

Upper Machodoc Creek	Gardner Creek
Rosier Creek	Jackson Creek
Monroe Bay	Bonum Creek
Mattox Creek	Yeocomico River
Popes Creek	Coan River
Nomini Bay	Presley Creek
Lower Machodoc Creek	Hull Creek
Unnamed Embayment	Hock Creek
(south of Ragged Point)
