VIRGINIA’S COMPREHENSIVE WILDLIFE
CONSERVATION STRATEGY

2005

PREPARED BY

THE VIRGINIA DEPARTMENT OF GAME AND INLAND FISHERIES
4010 WEST BROAD STREET
RICHMOND, VIRGINIA 23230

This project was funded in part by the U.S. Fish and Wildlife Service’s State Wildlife Grant Program, Grant No. VA-T-1-1.
This document should be cited as:

Acknowledgements

The Virginia Department of Game and Inland Fisheries (VDGIF) would like to acknowledge and thank those individuals and organizations that contributed to the Virginia Comprehensive Wildlife Conservation Strategy (CWCS). The successful development of this final document is due to the input and participation of staffs from multiple divisions of the VDGIF, as well as from other governmental agencies, recreation and conservation organizations, private industry, and academia. The discovery and recognition of a new common vision adds even greater value to these accomplishments.

Special thanks go to the VDGIF Core Working Group: Rebecca K. Wajda, Virginia’s CWCS Project Leader; Kathleen Q. Graham and Shelly A. Miller, Core Working Group Leaders; Kendell D. Jenkins; David D. Morton; W. Adam Phelps; and Susan H. Watson. Karen K. Reay, Virginia Institute of Marine Science, also participated on the Core Working Group while with VDGIF. Their spirit and dedication was fundamental to the completion of Virginia’s Comprehensive Wildlife Conservation Strategy. We extend deep appreciation to Adam Phelps for his exceptional service as editor. Mary Beth Murr and Frances Greenway contributed to the success of this project through administrative support.

Experts from government agencies, universities, and other organizations were invaluable in the development of the CWCS. We relied heavily on the Taxonomic Advisory Committees for professional evaluation of the list of species of greatest conservation need and habitats supporting those species, and in the identification of risks to those resources and, importantly, conservation actions to address those problems. A list of the individuals participating on those committees is located in Chapter 2 (Methods). Their service during this initiative was vital to the completeness of the CWCS; we could not have completed this work without them. We also received data from other agencies and individuals who were not formal participants in the CWCS teams. John Scrivani at the Virginia Department of Forestry provided data from the Forest Inventory Analysis. Jeff Goebel from the Natural Resources Conservation Service in Beltsville, Maryland, provided analysis of Natural Resource Inventory data. Several individuals at the Virginia Department of Environmental Quality (DEQ) and the Virginia Institute of Marine Science were helpful in identifying and providing datasets to assess water quality and wetland trends. We also want to thank DEQ for the permission to reprint the map in Appendix N. Monica Wait contributed to the sections regarding marine species and the agencies and organizations responsible for those resources.

The Internal Steering Committee, composed of representatives from VDGIF’s primary organizational units, provided critical guidance for addressing the required elements and ensuring that the project stayed within scope. They also supported the Core Working Group by directing resources within the agency to the accomplishment of this initiative. The Committee was composed of James C. Adams, Capital Programs; Major Gary M. (Mike) Bise, Law Enforcement; Frederick (Rick) A. Busch, Wildlife; Raymond T. Fernald, Wildlife Diversity; Virgil E. Kopf, Ph.D., Administrative Services; and Fred D. Leckie, Jr., Fisheries. Sincere thanks and appreciation is due to all of them.

The External Steering Committee, composed of representatives from governmental agencies, conservation organizations, and other interested parties, was key to ensuring the achievement a common vision for both the CWCS and the future of wildlife conservation in Virginia. Member commitment to this initiative was important to realizing project goals and will be critical to the successful implementation of the CWCS in the Commonwealth. The Committee included L. Peter Boice, U.S. Department of Defense; C. Fair Brooks, III, Ducks Unlimited; John Coe, Virginia Audubon Council; Dean P. Cumbia, Virginia Department of Forestry; M. Denise Doetzer, U.S. Department of Agriculture, Natural Resources Conservation Service; Frank M. Fulgham, Jr., Virginia Department of Agriculture and Consumer Services; Carol Hardy, Ph.D., U. S. Forest Service - George Washington and Jefferson National Forests; Julie Hawkins, U.S. Department of Agriculture, Natural Resources Conservation Service; David A. Hurt, Western Virginia Land Trust; Stephen J. Long, Virginia Department of Transportation; Karen A. Mayne, U.S. Fish and Wildlife Service – Virginia Field Office; Joseph McCauley, U.S. Fish and Wildlife Service - Rappahannock River National Wildlife Refuge; James M. McGowan, Accomack-Northampton Planning District Commission; Gordon C. Olson, National Park Service – Shenandoah National Park; Nicole Rovner, The Nature Conservancy – Virginia Office; Thomas L. Smith, Virginia Department of Conservation and Recreation; Jeffrey C. [continues]
Southard, Virginia Department of Transportation; and David K. Whitehurst, Virginia Department of Game and Inland Fisheries. Thanks are also due to Greg Moser and John Myers, U.S. Department of Agriculture, Natural Resources Conservation Service; Christopher Ludwig, Virginia Department of Conservation and Recreation; and Carl Garrison, Virginia Department of Forestry, for their participation on the External Steering Committee during this program.

The work of the External Steering Committee was expertly facilitated by Greg Brittingham, Center for Public Policy, Virginia Commonwealth University. In addition, he facilitated all of the public input meetings, resulting in considerable input and enthusiasm from participants.

This Strategy was funded in part by U.S. Fish and Wildlife Service State Wildlife Grants VA-T-1-1. We thank the U.S. Fish and Wildlife Service and the International Association of Fish and Wildlife Agencies for their guidance and support throughout the CWCS development process.

Foreword

My Fellow Virginians:

After his Natural Resources Leadership Summit in 2003, Governor Mark Warner asked the Virginia Department of Game and Inland Fisheries to develop a strategy that would chart a new course for the conservation and management of Virginia’s rich and abundant wildlife resources in the 21st century. The results would not simply continue our efforts to recover those animals whose populations are so low that they have been listed as threatened or endangered, nor would they focus solely on managing game wildlife. Rather, the final outcome, presented here, weaves together information about nearly 1,000 wildlife species in need of conservation, the essential habitats that support them, threats to these resources, and priorities for action.

I am particularly pleased with the outcome because it is the result of the efforts of hundreds of Virginians—not just employees of the Department of Game and Inland Fisheries and other agencies in my Secretariat, but also other agencies in state government, as well as members of federal, regional, and local agencies; outdoor and conservation organizations; industry; civic associations; colleges and universities; and interested private citizens. Through this collaborative partnership, we were able to draw upon decades of natural resource conservation efforts that have occurred across the Commonwealth. Through this partnership, we were also able to identify a wide array of needs that we must address if we are to continue our roles as stewards of these resources.

Article XI of the Constitution of Virginia charges state government with the responsibility of protecting natural resources. It reads, in part, as follows:

“To the end that the people have clean air, pure water, and the use and enjoyment for recreation of adequate public lands, waters, and other natural resources, it shall be the policy of the commonwealth to conserve, develop, and utilize its natural resources... to protect its atmosphere, lands and waters from pollution, impairment, or destruction, for the benefit, enjoyment and general welfare of the people of the commonwealth.”

This strategy presents a challenge to each and every Virginian. We cannot follow this new course or uphold our duty to conserve the Commonwealth’s biological diversity without the support of our citizens and the financial assistance of our elected officials. Let us come together, working from the same “blueprint,” to direct our time and resources collectively for our natural “common wealth.”

Within these pages, I hope that you will find your niche and do your part. Please join me in conserving our splendid natural resources.

Sincerely,

W. Tayloe Murphy, Jr.
COMMONWEALTH of VIRGINIA
Department of Game and Inland Fisheries

Preface

As the Commonwealth's wildlife agency, the Virginia Department of Game and Inland Fisheries and the Board of Game and Inland Fisheries recognize their important roles as stewards of these natural resources for the citizens of the Commonwealth. The Board and Department are committed to three key focal areas, as outlined in our mission statement:

- To manage Virginia's wildlife and inland fish to maintain optimum populations of all species to serve the needs of the Commonwealth;
- To provide opportunity for all to enjoy wildlife, inland fish, boating, and related outdoor recreation; and
- To promote safety for persons and property in connection with boating, hunting, and fishing.

In 2001, state wildlife agencies were presented with an exciting opportunity – millions in new grants to support critically underfunded wildlife conservation programs. In exchange, each state had to commit to the development of a wildlife conservation plan – a new strategy to protect species of greatest conservation need. We all agreed, perhaps not fully appreciating at the time the commitment required of our staffs and ourselves. Operating under requirements from Congress and guidance from the U.S. Fish and Wildlife Service, each state tackled this obligation in its own unique way.

I am particularly proud of our efforts in this initiative. During my tenure as a member and chairman of the Board, I have had few opportunities to participate in projects that have involved such a wide and diverse array of citizens and constituent groups. Every organizational unit in the agency actively participated in the development of this document. With the Wildlife Diversity Division leading this effort under the direction of its director, David Whitehurst, other biologists, game wardens, and specialists from our Fisheries, Wildlife, Law Enforcement, and Administrative Services programs all had key roles in this accomplishment. This is truly a document of the Department.

Importantly, this initiative allowed us to reaffirm and strengthen our relationships with our long-time conservation partners. It also allowed us to meet new friends, who have a vested interest in wildlife, expanding our conservation network. We have all agreed that this "blueprint" will guide us together, sharing our limited resources to address the commonly-identified priority needs.

This document is an important tool in our accomplishment of our mission, along with you, our partners. We thank you for your enthusiastic support of wildlife conservation activities across Virginia and welcome your participation in the implementation of this strategy.

Sherry Smith Crumley
Chairman, Board of Game and Inland Fisheries
August 18, 2005
Executive Summary

The authority and responsibility for fish and wildlife conservation in Virginia is vested with Virginia Department of Game and Inland Fisheries (DGIF) and the Virginia Marine Resources Commission (VMRC). These agencies have partnered with the U.S. Fish and Wildlife Service (USFWS) to manage harvested and endangered species under many federal programs. As a result, populations of many of these species have rebounded.

However, DGIF is also charged with managing all other wildlife in the Commonwealth. This responsibility has presented numerous challenges, primarily because of a lack of adequate funding. In 2000, the Virginia General Assembly recognized the importance and value of a broader “user pay, user benefit” approach and directed a portion of the state sales tax collected on wildlife-related outdoor recreation equipment to DGIF. While this additional revenue has enabled the agency to continue conservation and management programs, these resources do not address the continued shortfall of funds available for comprehensive wildlife conservation.

Congress began to provide annual funding to supplement existing state fish and wildlife conservation programs in 2001. Along with this funding came the responsibility of each state and territory to develop a Comprehensive Wildlife Conservation Strategy (CWCS) by October 1, 2005. In 2003, DGIF was also charged with the development of a similar strategy as a result of Governor Warner’s Natural Resources Leadership Summit. This task was also to be completed by October 1, 2005. This document, the resulting Strategy, is intended to fulfill both Congressional and Virginia state requirements.

Key to the successful development of this document was input from numerous partners, stakeholders, and citizens. The development of this CWCS has provided an unprecedented opportunity to develop important partnerships. This initiative has also provided a foundation from which all parties interested in wildlife conservation in the Commonwealth may work towards common conservation goals. It is a wildlife conservation strategy for the Commonwealth, not just DGIF.

Results are reported by six ecoregions across Virginia: the Coastal Plain, Piedmont, Blue Ridge, Ridge and Valley, and the Northern and Southern Cumberlands. This format provides a natural regional framework, allowing groups to focus conservation efforts at the appropriate level.

The Strategy includes an evaluation of the location and relative abundance of wildlife and the habitats required to support these species; an assessment of problems facing these species and habitats; recommended conservation actions to address these problems; research and survey needs; and monitoring programs and needs.

The Virginia CWCS identifies 925 species of greatest conservation need, 70% of which are invertebrates. These species are grouped into four tiers of relative conservation need: critical, very high, high, and moderate conservation need. These tiers allow for prioritization of threats facing species and of conservation actions addressing those threats.

Evaluation of the problems facing these species and actions needed to address those problems are presented in summary at the statewide level, as well as in more detail for each of six ecoregions. One approach taken was the distillation of the “Top 10” threats faced by terrestrial and aquatic wildlife. For terrestrial species, seven of the top 10 threats were related to habitat destruction or fragmentation from various sources, including development and some agricultural and forestry practices. Eight of the top 10 aquatic threats related to water quality, including pollution and sedimentation, are from such sources as development, industrial activities and some agricultural and forestry practices.

Priority conservation actions were developed statewide, and include detailed recommendations for coordination, education, enforcement, habitat management, land conservation, planning, regulations and policies, and species management.
Some of the most comprehensive and widespread issues identified in the development of this Strategy include:

(a) *A need for greater coordination between conservation partners.* The partnerships formed and renewed during this process will help to facilitate conservation projects statewide.

(b) *Unprecedented fragmentation and development of habitat.* This is one of the most frequently identified problems facing wildlife. To address it, those responsible for land planning will need to be more fully engaged in wildlife conservation efforts.

(c) *Invasive exotic plants and animals negatively impacting native wildlife and habitats.* Even though they are already widespread, the prevalence of invasive species is increasing in both aquatic and terrestrial communities. From exotic common reed (*Phragmites*) in coastal marshes to crayfish introduced through the bait trade, this is a crucial statewide conservation issue.

(d) *Existing data gaps that impede effective conservation planning and implementation.* For many species of greatest conservation need, basic life history and distribution information are not known. These gaps are critical to address, especially for Tier I species, in projects funded by the State Wildlife Grants program or by other conservation programs and partners.

(e) *A chronic shortfall in funding of conservation programs.* This issue was identified by both our partners and the public. Land acquisition and protection, research, and habitat management are expensive, and many species of greatest conservation need have historically been a low priority for the limited funding that does exist.

The next step of this process is implementation of the CWCS. The group of partners we have worked with to this point is being expanded to form Implementation Working Groups, with representation from a remarkably diverse group of organizations and interests.

Monitoring during the implementation phase of the Strategy will be an important evaluation tool: It will provide the framework necessary to modify and update the CWCS as new data are acquired and as conservation successes are realized.

The Comprehensive Wildlife Conservation Strategy provides a blueprint and vision for effective and efficient wildlife conservation in the Commonwealth. It draws on the strengths of existing efforts and partnerships, while recognizing that there is work to be done to ensure healthy wildlife populations in Virginia. In the decade between now and formal revision of the plan in 2015, we hope to accomplish much of that work.

“That to the end that the people have clean air, pure water, and the use and enjoyment for recreation of adequate public lands, waters, and other natural resources, it shall be the policy of the Commonwealth to conserve, develop, and utilize its natural resources, its public lands, and its historical sites and buildings. Further, it shall be the Commonwealth’s policy to protect its atmosphere, lands and waters from pollution, impairment, or destruction, for the benefit, enjoyment and general welfare of the people of the commonwealth.”
