Documentation of beneficial use: Attach documentation demonstrating that the annual and monthly amoun groundwater withdrawal requested is the smallest amount of withdrawal necessary to support the proposed beneficial and that the amount is representative to support similar uses when adequate conservation measures employed. Include a description of the product produced or the service provided, the unit of measure (acres, lbs., bushels, etc the product or service, the unit of time that the product or service is produced (day, month, year), the amount of was (gallons) required to produce a unit of product or service, and the quantity of the product or service. Include calculations showing the total amount of water required to produce a product or provide a service. Attach a line drawing showing the water flow through the facility/system. Indicate wells, meter locations, source surface intake, and treatment, or other operations generating wastewater. Construct a water balance on the drawing by showing average flows between intakes, treatment units and discharge points. Water demand projections: Include documentation to support the intended beneficial use over a ten year per cycle such as population and water demand projections and expansion plans. Describe special treatment (i.e. FEDR) when proposed. Apportionment of withdrawal to individual wells: Attach an operational pumping schedule for applications of multiple wells. Indicate whether the withdrawal from each well is daily, seasonal or intermittent. Describe frequency of use and pumping volume for each well for each month in a calendar year. WASTEWATER TREATMENT AND DISPOSAL: Will wastewater be generated as a result of the withdrawal of groundwater? YES NO (If yes, check the appropriate box below.) General Readment (Name of system) (Name of system)	JUS	TIFICATION FOR THE AMOUNT OF WITHDRAWAL REQUESTED:								
groundwater withdrawal requested is the smallest amount of withdrawal necessary to support the proposed benefit use and that the amount is representative to support similar uses when adequate conservation measures employed. Include a description of the product produced or the service provided, the unit of measure (acres, lbs.,bushels, etc the product or service, the unit of time that the product or service is produced (day, month, year), the amount of wit (gallons) required to produce a unit of product or service, and the quantity of the product or service. Include calculations showing the total amount of water required to produce a product or provide a service. Attach a line drawing showing the water flow through the facility/system. Indicate wells, meter locations, source surface intake, and treatment, or other operations generating wastewater. Construct a water balance on the drawing by showing average flows between intakes, treatment units and discharge points. Water demand projections: Include documentation to support the intended beneficial use over a ten year per cycle such as population and water demand projections and expansion plans. Describe special treatment (i.e. feDR) when proposed. Apportionment of withdrawal to individual wells: Attach an operational pumping schedule for applications of multiple wells. Indicate whether the withdrawal from each well is daily, seasonal or intermittent. Describe frequency of use and pumping volume for each well for each month in a calendar year. WASTEWATER TREATMENT AND DISPOSAL: Will wastewater be generated as a result of the withdrawal of groundwater? YES	Brie	fly describe the nature of the activity and the proposed beneficial use of groundwater.								
groundwater withdrawal requested is the smallest amount of withdrawal necessary to support the proposed benefit use and that the amount is representative to support similar uses when adequate conservation measures employed. Include a description of the product produced or the service provided, the unit of measure (acres, lbs.,bushels, etc the product or service, the unit of time that the product or service is produced (day, month, year), the amount of w. (gallons) required to produce a unit of product or service, and the quantity of the product or service. Include calculations showing the total amount of water required to produce a product or provide a service. Attach a line drawing showing the water flow through the facility/system. Indicate wells, meter locations, source surface intake, and treatment, or other operations generating wastewater. Construct a water balance on the drawing by showing average flows between intakes, treatment units and discharge points. Water demand projections: Include documentation to support the intended beneficial use over a ten year per cycle such as population and water demand projections and expansion plans. Describe special treatment (i.e. fEDR) when proposed. Apportionment of withdrawal to individual wells: Attach an operational pumping schedule for applications of multiple wells. Indicate whether the withdrawal from each well is daily, seasonal or intermittent. Describe frequency of use and pumping volume for each well for each month in a calendar year. WASTEWATER TREATMENT AND DISPOSAL: Will wastewater be generated as a result of the withdrawal of groundwater? YES NO (If yes, check the appropriate box below.) Septic Tank and Drainfield Name of system) (Name of system)

7. WELL LOCATION(S):

Locate all wells (existing, proposed, abandoned, out of service), facility property boundaries and/or water supply service area associated with the application on a (1) United States Geological Survey 7 1/2 minute topographic map, or copies of such maps, and (2) detailed location map of each existing and proposed well. The USGS map should contain the quadrangle name, the scale of the map, and a north arrow. The detailed location map must be of sufficient detail such that all wells may be easily located for site inspection.

8. EXISTING WELL INFORMATION

Complete the well information worksheet for all existing wells associated with this application. <u>ATTACH</u> copies of original water well completion reports for each well listed below. DEQ well identification plates must be attached to each existing well. Well identification plates can be obtained from the Groundwater Withdrawal Permitting Program.

	Owner well #	er DEQ [# Well#	DEQ Depth Pu Vell # (ft.) Cap (gr	Pump	Pump Pump apac. Set gpm) (ft)	Well* Type	Well** Status	Screen Interval(s) (ft.)	Office Use Only		
Well Name				Capac. (gpm)					Latitude NAD27	Longitude NAD27	EI (ft.)

Attach additional sheets if necessary

^{*} Well Types: (P) Production, (M) Monitoring, (E) Emergency Standby, (R) Drought Relief, (S) Aquifer Storage & Recovery (D) Permanent Dewatering, (O) Other - Specify ** Well Status: (Act) Active, (Abn) Abandoned, (Alt) Altered From the Original Construction, (OOS) Out of Service

9. PROPOSED WELL INFORMATION

Complete the proposed well information worksheet for all proposed wells associated with this application. Contact the Groundwater Withdrawal Permitting Program to obtain DEQ well identification numbers prior to the start of drilling operations. Reference the DEQ well identification number on all drilling documentation. A DEQ well identification plate must be attached to each completed well. Contact DEQ at least two weeks prior to the start of drilling operations for each proposed well.

^{**} Well Status: (NEW) New, (REP) Replacement Well, (ALT) Altered

10. LOCAL AND AREAWIDE PLANNING REQUIREMENTS:

Attach the notification from the local governing body of the county, city or town in which the withdrawal is to occur that the location and operation of the withdrawing facility is in compliance with all ordinances adopted pursuant to Chapter 22 (§15.2-2200 et seq.) of Title 15.2 of the code of Virginia.

If the Local Government Ordinance Form (LGOF) is not enclosed, enclose documentation demonstrating that the county, city or town failed to respond within 45 days to such a request made by the applicant by certified mail, return receipt requested (9 VAC 25-610-94(2)(i)).

11. EVALUATION OF THE LOWEST QUALITYWATER NEEDED FOR THE INTENDED BENEFICIAL USE:

Attach an evaluation of the lowest quality water needed for the intended beneficial use. The evaluation must include a list of critical water quality parameters with minimal limits which are associated with the type of use. Demonstrate that the groundwater withdrawal will originate from the aquifer that contains the lowest quality water that will support the proposed beneficial use.

12. EVALUATION OF SOURCES OF WATER SUPPLY, OTHER THAN GROUND WATER:

Attach an evaluation of sources of water supply, other than ground water, including sources of reclaimed water. Include information as to the proximity to public water supplies, surface water sources and sources of reclaimed water.

13. WATER CONSERVATION AND MANAGEMENT PLAN:

Provide, as a stand-alone attachment, a water conservation and management plan to <u>include</u>, <u>at a minimum</u>, the following:

- Requirements for the use of water saving plumbing and processes including, where appropriate, the use of water saving fixtures in new and renovated plumbing as provided in the Uniform Statewide Building Code;
- ♦ A water loss reduction program;
- ♦ A water use education program;
- ♦ An evaluation of potential water reuse options;
- ♦ Requirements for mandatory water use reductions during water shortage emergencies declared by the local governing body or the Director of DEQ, including, where appropriate, ordinances prohibiting the waste of water generally and requirements for mandatory water use restrictions, with penalties during water shortage emergencies.

14. AREA OF IMPACT OF THE PROPOSED WITHDRAWAL:

Pursuant to 9 VAC 25-610-110(D)(2) of the Groundwater Withdrawal Regulations, DEQ staff will perform a technical evaluation to determine the areas of any aquifers that will experience at least one foot of water level decline due to the proposed withdrawal. Hydrogeologic information such as, but not limited to, aquifer properties (transmissivity and storage coefficient) obtained from aquifer testing may be required.

15. MITIGATION PLAN:

Pursuant to 9 VAC 25-610-110(D)(3)(g) of the Groundwater Withdrawal Regulations, if the DEQ's technical evaluation determines the predicted area of impact extends beyond the property owned by the applicant and/or other groundwater users exist within the area of impact, a mitigation plan is required. Since the area of impact most often extends beyond the applicants property, it is recommended that a mitigation plan be submitted at the time of application to reduce application processing time. In the event that the results of the technical evaluation show that the area of impact remains on the applicant's property or there are no groundwater users within the area of impact, DEQ staff will inform the applicant that a mitigation plan is not required. A model mitigation plan is included in the groundwater permit application package.

16. EVALUATION OF THE 80% DRAWDOWN CRITERION:

Pursuant to 9 VAC 25-610-110(D)(3)(h) of the Groundwater Withdrawal Regulations, DEQ staff will conduct an evaluation to demonstrate that the proposed withdrawal in combination with all existing lawful withdrawals will not lower water levels, in any confined aquifer that the withdrawal impacts, below a point that represents 80% of the distance between the historical prepumping water levels in the aquifer and the top of the aquifer.

17. ADDITIONAL INFORMATION REQUIRED BY THE BOARD

Title:

Phone:

In addition to information requested at the preapplication conference, DEQ staff may require hydrogeologic and geophysical information necessary to characterize the aquifer system during application processing and review to obtain a complete application. Information including, but not limited to, the following may be required: Aquifer testing plan Pump test (step drawdown test); Aquifer test (constant rate discharge test); Monitoring well installation; Collection and analysis of drill cuttings; Collection and analysis of continuous core; Geophysical logs (spontaneous potential, single point resistance, 16/64 short and long normal resistivity, and natural gamma) Camera survey ☐ Water quality sampling; Other I certify under penalty of law that this document and all information submitted were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering information, the information submitted is to the best of my knowledge, accurate and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment for knowing violations. I further certify that I am an authorized signatory as specified in the Groundwater Withdrawal Permit Regulation 9 VAC 25-610-10 et seg. Signature: Date:
